Plants For A Future: A resource and information centre for edible and otherwise useful plants

Plants For A Future (PFAF) is a charitable company, originally set up to support the work of Ken and Addy Fern on their experimental site in Cornwall, where they carried out research and provided information on edible and otherwise useful plants suitable for growing outdoors in a temperate climate. Over time they planted 1500 species of edible plants on 'The Field' in Cornwall, which was their base since 1989.

We are always grateful for any donations, investments and legacies (however small or large).
